

Lathe I

// natural

AE//

The inspiration for this collection comes from the classical turned leg, found under many wooden tables. By deconstructing the table and only using the legs, a collection of stools, side tables and pedestals is formed.

The name of the collection refers to the lathe, a machine tool that rotates a piece of wood about an axis of rotation to perform various operations such as cutting, sanding and turning, to create an object with symmetry about that axis.
